PROFILE

I am a seasoned Full Stack Developer with over 5 years of experience specializing in crafting robust, scalable, and secure features. My expertise lies in writing clean, maintainable, and efficient code, ensuring seamless functionality across applications. Proficient in all phases of the development lifecycle, I am dedicated to driving the continuous adoption and integration of cutting-edge technologies to enhance product development.

EMPLOYMENT HISTORY

Full Stack Developer at Caiena Tecnologia

September 2020 — December 2023

- Developed scalable features for a social project management system for Municipal Education Directors using Ruby on Rails and JavaScript.
- Applied Agile Scrum methodology to manage project development efficiently.
- Wrote clean and maintainable code, contributing to all phases of the development lifecycle.
- Utilized AWS, Git, Github, and Linux technologies for developing and maintaining the system.

Full Stack Developer at CDD IT - Service Innovation

September 2021 — October 2022

- Developed digital market features for supermarket St. Marche using Ruby on Rails.
- Spearheaded the design and implementation of a complimentary management system tailored for Municipal Education Directors, significantly enhancing query efficiency. Through my efforts, we achieved a remarkable 90% reduction in query times, optimizing system performance and streamlining operations.
- Managed API development and integration using REST API.
- Constructed Docker and Heroku environments for deploying and scaling applications.
- Implemented Scrum methodology to efficiently manage project development.

Full Stack Developer at Impulso – Yapay Locaweb and Bxblue

September 2020 — October 2021

- Engineered robust, scalable online payment system features for the Locaweb team, alongside crafting a platform-as-a-bank service for BxBlue. Leveraged Ruby on Rails to ensure seamless functionality and streamlined maintenance.
- Worked on the credit portability feature, building the application from inception to delivery with a robust architecture and 100% test coverage. This initiative increased the company's revenue by 60%.
- Integrated secure payment gateways, ensuring adherence to stringent data security standards. Leveraging Rails' robust support for background jobs, particularly Sidekiq, I optimized payment operations with features like recurring billing, refunds, and transaction histories
- Managed API development and integration using REST API.
- Constructed Docker and AWS environments for deploying and scaling applications.
- Implemented Scrum methodology to efficiently manage project development.

Front-end Developer at Binamik Technology

July 2018 — August 2019

- Worked on the Billing team of the Binamik Platform, a digital sales solution for tourism.
- Developed secure features using React.JS and JavaScript contributing to a robust platform.
- Utilized CircleCI for continuous integration and delivery, ensuring efficient code deployment and delivery.
- Implemented Google Cloud Platform for scaling and managing applications.

EDUCATION

Bachelor, Unigram - Universidade de Dourados

January 2023

Bachelor, UFGD - Universidade Federal da Grande Dourados

January 2015
